PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years in production, specializing in ASP.NET Core 8, C# and Clean Architecture. Built an active e-commerce platform handling 200+ monthly orders - multi-step Stripe checkout, webhooks, per-order inventory reservation, and a background service that auto-expires unpaid orders every 5 minutes. At Mozart, built the backend for the company's ERP core modules from scratch: 80+ REST endpoints and a logging system the support team uses in production every day. Projects at github.com/orrrrli.

CORE COMPETENCIES

ASP.NET Core 8 / C#

Clean Architecture / CQRS

PostgreSQL / EF Core

Stripe / Webhooks

REST API Design

JWT Auth

Docker / CI/CD

Git / GitHub Actions

React / TypeScript

Node.js / Express.js

Azure / VPS

WORK EXPERIENCE

Sistemas de Informacion Mozart Jun 2024 - Feb 2026

Software Engineer

- Built 80+ REST endpoints using ASP.NET Core 8, C# and EF Core under Clean Architecture and CQRS - the backend for the company's ERP system (core modules).
- Built a production-side logging system with role-based access so the support team could identify and triage errors without escalating to development.
- Implemented cursor-based pagination for a data-heavy module loading 5,000+ records with ~20 properties each - cut load time from 10-12 minutes down to 4-5 minutes.
- Architected the .NET backend for an Android ERP companion app and coordinated API contracts with the mobile team (Kotlin/Jetpack Compose), enabling warehouse staff to run operations on mobile without blocking either team's progress.
- Researched and built a proof-of-concept for Azure migration (App Service, Blob Storage, Azure SQL) so the team could make the infrastructure decision with real data.

Sistemas de Informacion Mozart Feb 2024 - May 2024

Junior Software Engineer (Internship)

- Developed accounting system features in C# and Windows Forms - business logic for financial report generation across relational data.
- Reduced query overhead with LINQ projections - selecting only required fields, eliminating unnecessary entity loads to improve data retrieval efficiency in report generation.

Freelance - Backend & Full-Stack Development Jan 2024 - Present

Freelance Full-Stack Developer

- E-Commerce (production, 200+ orders/month):** Built the full backend - multi-step checkout with Stripe, webhooks for payment confirmation, per-order stock reservation and restoration, a background service that expires unpaid orders every 5 minutes and releases inventory, and an admin panel for the store team. Stack: Next.js 15, TypeScript, Stripe, PostgreSQL, Prisma, Resend, Cloudinary.
- Metavix (Medical Platform, closed beta, 20 users):** REST API with Clean Architecture and CQRS/MediatR, JWT auth, doctor-patient linking flow, and a self-hosted open-source model (Google Gemma 3n) to generate clinical insights without sending patient data to third parties. Stack: ASP.NET Core 9, PostgreSQL, Docker, VPS + Nginx.
- Sports Academy Platform (production):** Stripe payments, enrollment management, student roster, and Google Sheets integration for admin reporting. Delivered solo from spec to deploy.

Web Developer

- Built a full WMS solo from scratch - React + TypeScript, 20+ Node.js/Express endpoints, PostgreSQL, Docker and CI/CD with GitHub Actions. Replaced a manual process costing the client 10+ hrs/week.
- Integrated real-time shipment tracking with Estafeta - no public API existed, so I built a scraping layer isolated as a standalone service so changes on Estafeta's side wouldn't affect the rest of the system.
- Built reusable components with React, Remix and Tailwind CSS that the team adopted across all client projects.

FEATURED PROJECT

Dog Breed Detector Deployed

Web application that identifies dog breeds using a computer vision model trained with TensorFlow, Keras and Azure Custom Vision. Deployed to Azure App Service.

TensorFlow | Keras | Azure Custom Vision | Azure App Service | [View demo](#)

EDUCATION

B.S. in Software and Emerging Technologies Engineering 2019 - 2024
[Autonomous University of Baja California \(UABC\)](#)

CERTIFICATIONS

Meta Front-End Developer	Coursera / Meta	2023
Preparing for Google Cloud Certification: Cloud DevOps Engineer	Coursera / Google Cloud	2023

TOOLS & TECHNOLOGIES

Backend: ASP.NET Core 8/9, C#, Node.js, Express.js, Clean Architecture, CQRS/MediatR, xUnit
Databases: PostgreSQL, SQL Server, MySQL, Entity Framework Core, Prisma ORM **Payments:** Stripe (checkout, webhooks)
Frontend: React, Next.js 15, TypeScript, Tailwind CSS, Zustand
Cloud & Infrastructure: Azure (App Service, Blob, SQL), Docker, GitHub Actions, VPS, Nginx, Render
Tools: Git, GitHub, Postman, Swagger, Claude Code, GitHub Copilot **Languages:** Spanish (Native), English (B1)
